Art Unit: 1617

Claims 1-21 are pending in this application.

Applicant's claims are drawn to an agglomerate NPK fertilizer comprising bacteria and methods of making them.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combined teachings of Burnham (US 6,841,515), Burnham et al (US 5,853,450), and Kimura (US 5,093,262).

Burnham teaches the production of biosolid granules for use as fertilizers (abstract).

Burnham et al teach the utility of incorporating wastewater or bioorganic sludges including microbial matter in fertilizer compositions.

Kimura teaches methods of incorporating nitrogen fixing bacillus material into dried fertilizer compositions containing conventional NPK fertilizer materials (column 6).

One of ordinary skill in the art would be motivated to combine these references because they teach the utility of combining microbial materials into fertilizer compositions.

Thus it would have been *prima facie* obvious to the ordinary artisan at the time the invention was made to have made a granular fertilizer composition comprising a bacterial fermentation product because the prior art teaches solid fertilizer compositions comprising known NPK fertilizer components in combination with bacterial materials.

No unobvious or unexpected results are noted; no claim is allowed.

Art Unit: 1617

Any inquiry concerning this communication or earlier communications from the examiner should be directed to S. Mark Clardy whose telephone number is 571-272-0611. The examiner can normally be reached on 7:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreenivasan Padmanabhan can be reached on 571-272-0629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
